

AT&T Canada private line service

secure
and **dedicated**
high bandwidth
performance

Your business is growing. You're extending your scope and conquering new markets. You know that information sharing and collaboration are fundamental to success, placing an even greater emphasis on mission-critical data communications. You can't afford delays, breakdowns or errors when moving large amounts of information. You need a network solution that delivers dedicated connectivity and reliable data transport to ensure the speed and efficiency required to support high-volume transactions, to access corporate intranets and extranets and to integrate voice services.

AT&T Canada Private Line Service is the strategic choice for bandwidth-intensive applications requiring real-time transport of voice, data and video. You have the ability to connect multiple locations with point-to-point or point-to-multipoint configurations. Whether you are interconnecting LANs and WANs, sharing CAD/CAM files, conducting weekly videoconferences or managing Internet connections, you have the power and the dependability that your broadband communications demand.

The Reliability Your Business Demands

AT&T Canada Private Line Service facilitates secure and reliable information sharing for your growing business with:

- **One Infrastructure.** High capacity, dedicated bandwidth enables you to consolidate all of your time-sensitive applications over your own private digital network.
- **Versatile Connectivity.** A single solution links multiple locations within a city or across the country with the highest security and lowest end-to-end latency possible.
- **High Bandwidth Availability.** AT&T Canada Private Line Service offers scalable bandwidth options ranging from 56 Kbps up to high speed 2.5 Gbps (OC48) to readily grow with your business and adapt to your changing needs.
- **Multiple Outputs.** While many providers only support single outputs, AT&T Canada has the advanced technology to support multiple outputs, using state-of-the-art multiplexing platforms.
- **Guaranteed Throughput.** Quality is essential for your data communications. AT&T Canada Private Line Service provides constant bit rate characteristics to ensure jitter-free voice and video communications.

Maximizing Value for Your Business

Industry Leading Network. AT&T Canada supports your telecommunications needs with one of the largest OC-192 optical switching networks available in Canada. With more than 18,000 route kilometres of fibre optic cable stretching from coast to coast, our extensive network footprint incorporates highly engineered, fault tolerant switching technologies to provide robust and reliable data communication solutions.

Network Interoperability. Each Data Network Service within the AT&T Canada portfolio has the capability of interconnecting with the other services, extending the value of your current network investment toward the evolution of your data requirements. With all Data Network Services supported by a consistent, dependable and high quality technology infrastructure, you are able to focus on shaping your network according to your business needs, without having to worry about the technology sustaining your solution.

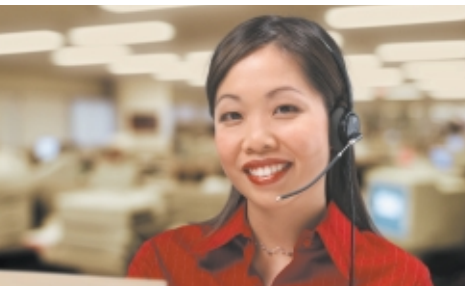

Reliability. Our Standard Service Levels (SSLs) provide comprehensive metrics on the Business IP, ATM, Frame Relay, Private Line and Transparent LAN Service core networks. With definitive objectives reflecting AT&T Canada network engineering and internal process, you are able to anticipate data service performance more accurately.

Scalability. AT&T Canada provides a comprehensive suite of Data Network Services that allow you to evolve your data capabilities to support changing strategic priorities and business growth. With long haul optical capacity and global transport capability, you can extend your data activities by capitalizing on high inter-city capacity to all major cities in Canada and cross border to strategic locations in the United States.

National and International Reach. Transport data locally, nationally or internationally with seamless and secure network connectivity throughout Canada and the U.S.

Expertise. Demanding network priorities can shift your focus away from your core competencies. AT&T Canada provides managed network solutions that span the spectrum from basic router monitoring to customized, complex solutions. Relying on our network management expertise ensures that you have the time and resources to dedicate to running your business.

Dependable Support. Technical support representatives are always available to assist you, 24 hours a day, seven days a week.
